Subject: Secondary Plants less than 1 MGD
Date: 08/23/2011 08:18 AM

The design flow for Havre appears to be 1.8 MGD from the 2008 list. The actual flow may be right below 1 MGD. Nonetheless, by our definition, we are using design flow for categories, so I will keep Havre in the >1 MGD category unless either of you object.

So, what about other advanced (secondary) plants less than 1 MGD?

Chinook
Big Fork (but we list that as a lagoon)
Colstrip
Forsyth
Laural
Lolo
Stevensville

Hardin has a design flow of 1.0 MGD
